

Our Most Powerful Snow Machine

Ultratec's Turbo Fan with Snow Machine can be positioned on stage or hung from stage rigging to meet a variety of production needs. Constructed with heavy-duty stainless steel it is our most powerful snow machine. When using full directional airflow, the Turbo Fan with Snow Machine can distribute snow over 60 feet.

The Turbo Fan has built-in variable speeds, providing powerful, fast, and secure control. Its positive-locking positioning base also makes for quick and easy set-up. At full directional airflow, its sound level is 70dB. Control is provided using an optional DMX/W-DMX with RDM mode interface for powerful, fast and secure control.

Designed to provide continuous snow fall with extensive distribution on queue for large and small theatre productions, and other live events. The Turbo Fan with Snow Machine can be paired with the Swivel Bracket to maximize the distribution of snow fall.
